

Amendments to the Abstract:

ABSTRACT OF THE DISCLOSURE

~~The present invention provides a display device such as a~~ A liquid crystal display device ~~which can enhance a response speed. The display device includes a pixel electrode to which a video signal is supplied and a counter electrode to which a reference signal which becomes the reference with respect to the video signal is supplied in each pixel. The~~ In the display device ~~includes means which forms a positive-side gray scale voltage and a negative-side gray scale voltage in a following manner and drives the pixel using these voltages~~ are formed. The positive-side gray scale voltage and the negative-side gray scale voltage are formed with respect to the reference signal ~~applied to the counter electrode~~ such that an average value of the positive-side gray scale voltage and the negative-side gray scale voltage is increased along with ~~the~~ an increase of a the signal amplitude of the video signal in the vicinity of the minimum thereof, the average value is decreased along with ~~the~~ a further increase of the signal amplitude of the video signal, and the average value is increased along with ~~the~~ an increase of the amplitude of the video signal in the vicinity of the maximum thereof.
